## THERMAL CLEARANCE TESTING OF THE VISIONLINE TAURUS FREE-STANDING APPLIANCE

### Report

The VisionLINE Taurus Free-Standing appliance installed with a Wildcat 6” triple flue kit with 8” decromesh casing was tested in one position in a manner conforming to joint Australian/New Zealand Standard 2918:2018, Appendix B.

A minimum 440mm deep x 1040mm wide x 100mm thick floor protector (Hebel Block) must be used under the appliance, 1230mm wide x 600mm deep x 42mm thick floor protector (compressed board) must be used in front of the appliance base when installing the appliance (see joint AS/NZS 2918:2018 3.3.2). The floor protector should extend 600mm in front of the appliance door and be placed centrally in the 1230mm width. The Thermal resistivity of the floor protector is 0.26m<sup>2</sup>.K/W for 150mm thick Hebel blocks and 0.08m<sup>2</sup>.K/W for 6mm thick compressed cement sheets.

The VisionLINE Taurus Free-Standing solid fuel appliance installed with a Wildcat 6” triple flue kit with 8” decromesh casing conforms to the requirements of the joint AS/NZS 2918:2018 Standard, Appendix B.

The appliance and flue system were tested at the following clearances:

## 1. INTRODUCTION

Thermal Clearance testing of the VisionLINE Taurus appliance and flue system took place on 17 & 18 February 2020 at the Australian Solid Fuel Testing Laboratory located at 3 Garden Street, Morwell, Victoria. The testing was performed by Mr G.W. Mooney and Mr S. Marland.

## 2. PROCEDURE

Testing was conducted as per Appendix B of AS/NZS2918:2018, Hot sites were located with the aid of an infra-red thermometer. Thermocouple tips were stapled onto the test surfaces, with black tape over the first 100 mm to facilitate consistent and accurate recording of temperatures.

Thermocouple positions are shown in the table below:

### Position A – Parallel Position

Thermocouple No.	Position	Thermocouple No.	Position

## 3. TEST FUEL

Testing was conducted with Pinus Radiata as the test fuel which had a moisture content of 11.3% moisture. Each firewood piece was 300mm x 80mm x 40mm.

## 4. FLUE SYSTEM

The flue system used during testing was a Wildcat 6” triple flue kit with 8” decromesh casing was supplied by Wildcat Industries Pty Ltd. This flue system has not been tested to joint AS/NZS 2918:2018, Appendix F. The flue height was  $4.6 \pm 0.1$ m from the floor protector. Appendix 1 shows details of the flue system.

## **5. RESULTS**

### **5.1 High Fire Test**

The appliance was fired in accordance with Section B9.1 of AS/NZS2918;2018. The level of fuel was maintained between 50-75% of the full volume level of the fuel chamber during the High Fire test.

The average fuel load for initiating the High Fire tests was 10.0kg with an average refuelling rate of 1.4kg/10 minutes.

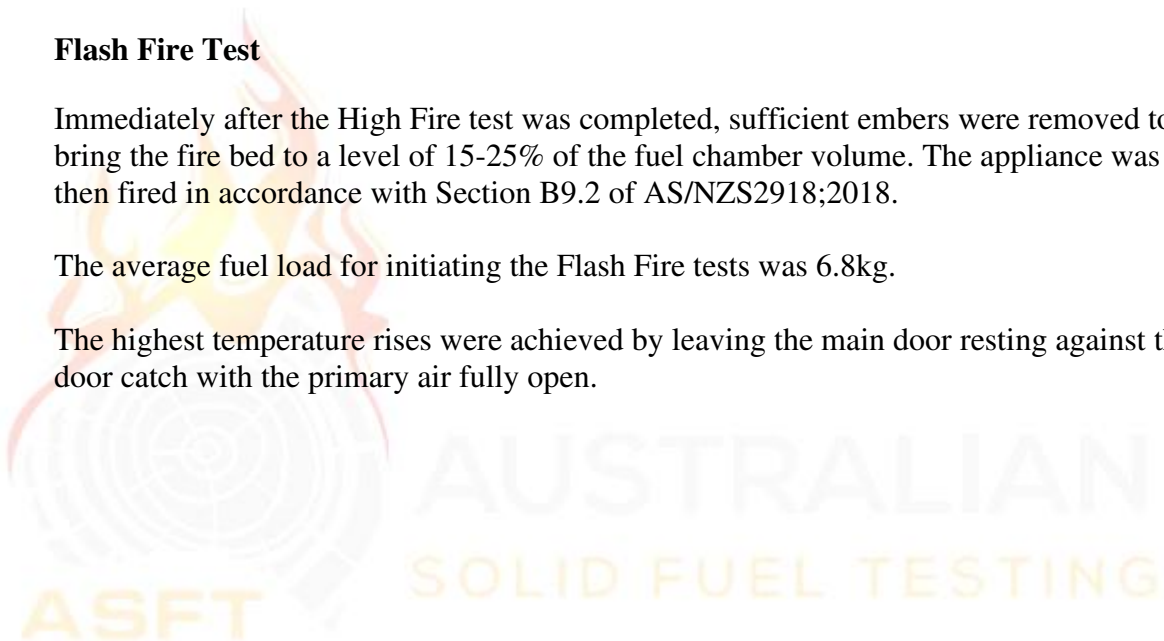

During High Fire testing it was found that the highest surface temperatures occurred when the primary air control of the appliance was fully open.

### **5.2 Flash Fire Test**

Immediately after the High Fire test was completed, sufficient embers were removed to bring the fire bed to a level of 15-25% of the fuel chamber volume. The appliance was then fired in accordance with Section B9.2 of AS/NZS2918;2018.

The average fuel load for initiating the Flash Fire tests was 6.8kg.

The highest temperature rises were achieved by leaving the main door resting against the door catch with the primary air fully open.

### 5.3 Ambient and Test Surface Temperatures

The Tables below show the Ambient temperatures and test surfaces temperatures during testing of the appliance and flue combination:

#### *Ambient Temperature Range °C*

Position	High Fire	Flash Fire
A	16.0 – 27.2	21.0 – 28.2

#### *Maximum Surface Temperature Rise above Ambient - Position A*

Position	Thermocouple Number	High Fire Test (°C)	Thermocouple Number	Flash Fire Test (°C)
Floor	7	62.4	7	61.3
Ceiling	19	47.7	19	52.6
Rear Wall	29	61.9	29	60.2
Side Wall	26	60.6	26	62.8

### 5.4 Uncertainty of Measurement Statement

5.5.1 The uncertainty of distance measurement for determining clearance distances was not greater than  $\pm 3$ mm.

5.5.2 The uncertainty of temperature measurement during the entire test period was a maximum of  $\pm 2^\circ\text{C}$  at a 95% confidence level.
